

INDAZOLE DERIVATIVES AS JNK INHIBITORS AND
COMPOSITIONS AND METHODS RELATED THERETO

ABSTRACT OF THE DISCLOSURE

5

Compounds having activity as selective inhibitors of JNK are disclosed. The compounds of this invention are indazole derivatives having the following structure:

10

wherein R₁, R₂ and A are as defined herein. Such compounds have utility in the treatment of a
15 wide range of conditions that are responsive to JNK inhibition. Thus, methods of treating such
conditions are also disclosed, as are pharmaceutical compositions containing one or more
compounds of the above compounds.
